
Fundamentals of Management & Strategic Thinking

Academic course

Level of course unit: Master

ECTS: 5

Language of Instruction: English

Course Dates: 05.09.-28.10.2022

Course will take place on site at the MCI in Innsbruck

Learning Outcomes:

Students should be able to communicate objectives and create plans to realize the goals in a team. Students should understand the underlying principles of healthcare delivery, including the factors that have shaped the service as we know it today. There should be awareness of the nature and effect of service and financial pressures and how these influence and impact on the role and responsibilities of healthcare professionals. Students should gain insight into the core business of healthcare, the nature of medicine and how it is governed within the work-place. This should include familiarity with the language, structure and nature of models of care and new concepts that are changing the way care is delivered. Students should be aware of the dynamics of the professionals' working environment including organizational systems, management and professional cultures and the principle of responsible autonomy¹ of professionals.

Students should be able to formulate their own view on the desirable design of specific health care organizations and inter-relationships based upon current institutional relationships and an assessment of environmental factors. Students should be able to reflect upon management styles and demonstrate management skills by complying to the course requirements. Students should articulate their perspective of health care management using transformational and transactional theories of management (including skill, trait, style and situational approaches to

management).

Students should be able to examine and debate emerging health care issues with your peers.

Students should be able to reflect upon management styles and demonstrate management skills by complying to the course requirements.
